Once again you were inattentive. Forgot to enable sock.txfree check for all data sent. I fixed it. Now the data is sent correctly. Thanks, now I see that it works. In general, the method you used corresponds to [https://docs.tibbo.com/taiko/sock\\_url\\_subst](https://docs.tibbo.com/taiko/sock_url_subst). Next, on your sample, I will try to investigate the speed of data request.
